

SHOT 2 BLACK AND RUST, A NEW UNMISSABLE LIMITED EDITION FROM SIDI
Introducing a classy limited color for the new season ahead.

Rust is the new color trend and it seems to be here to last. As the name suggests, it is a combination of red-orange-brown, very similar to iron oxide, and it has become really popular in recent months.. Everyone seems fascinated by this retro shade and Sidi could not stand its charm and launched a new limited edition for its Shot 2.

The totally rust tinged upper shoe, made in TechPro Microfiber, a lightweight water-repellent and eco-friendly material, will give every cycling outfit an elegant and sophisticated touch. Plus, the Sidi logo on the side and the mesh inserts - which provide for great breathability, creating an ideal inner microclimate - are in black, perfectly matched with an over-the-top shade like the rust one.

The features of Sidi Shot 2 in a nutshell.

SHOT 2 are high-performance shoes characterised by a great response in the pushing phase. Lightness, comfort, and design are further enhanced. The new integrated heel box is even lighter and reinforced so as to prevent any deformations after efforts and extended pressures. The new "C-BOOST SRS" sole made with state-of-the-art carbon is characterised by a special shape of the metatarsal area that allows for greater power transmission on the pedals. The carbon parts most inclined to deterioration are protected by special SRS inserts in Nylon and Thermoplastic Polyurethane integrated with ventilation holes to favour breathability. The steel screws reduce wear and tear and make the product more resistant to abrasion during walking.

The shoes have the "Double Techno3 Flex" closure system to completely eliminate the area of pressure on the instep and greatly improve the sensation of closure. It is replaceable and guarantees micrometric adjustment and closure speed thanks to a quick release of tension.
