

### **SIDI Genius 10, as iridescent as a soap bubble**

*Classic, durable and versatile design now available in a totally sparkling version.*

Genius 10 dresses in iridescent blue, a completely new and personal colouring, aimed at enhancing the features of one of the best-selling products of the Treviso-based company.

Wrapped in light effects, just like soap bubbles, the Genius 10 proposes intriguing blue shades, showing off an even more glamorous and versatile look. The countless colours released by the upper made of Microtech Microfibre - a light, breathable, water-repellent and eco-friendly material - make it even easier to match with whimsical outfits, whilst they also go perfectly with essential combinations. Whatever your attitude, the Genius 10 Blu Iridescent are the ideal shoes for your next outing.

If the colour changes according to the angle of observation, the characteristics remain unchanged and can be briefly summarised as performing, comfortable, and technological.

TECNO-3 and SOFT INSTEP Closure System - 4 are the two patented systems to which Genius 10 entrusts its closure. As TECNO 3 allows the upper to adapt perfectly to the shape of the foot, the anatomical and soft strap, SOFT INSTEP Closure System - 4, allows adjustment of both sides so as to distribute the pressure evenly on the instep.

The light and rigid sole in nylon and injected carbon fibre, Carbon Composite 20, on the other hand, allows the technical characteristics to remain unaltered over time, as well as having a central part - graduated in millimetres - to ensure correct fixing of the cleats.
