

The Crossfire 2 SM is born with a snappy soul and natural versatility

Technology, safety, comfort and above all grip are the main features for on and off road riding.

Agility, sprints and drifts are what the Crossfire 2 SM boots will handle every time you go into action and will show all their skills both on and off the track.

With its TECHNO MICRO microfiber construction, lined with Teflon and Cambrelle, these boots, designed exclusively for Supermotard, offer specific features for a discipline that really puts shoes and especially soles to the test due to rubbing on the usually sharp footpads. The Crossfire 2 SM features a replaceable SMS Supermoto sole in red, made from a soft compound for optimum grip. The boot can also be fitted with a yellow version, which is a little stiffer and suitable for riding when pushing on the footpads is a must.

Developed on the experience and expertise of Sidi technicians and feedback from professional riders supported by Sidi, Crossfire 2 SM pays particular attention to safety and includes a replaceable anatomical plate positioned at the shin as well as a plate with double adjustment placed inside the boot cuff, designed to protect from the heat of the exhaust gases and wear. The toe is entirely covered with plastic protection panels and has a raised geometric design for greater grip, while an anatomical sock secures the foot, even in the event of twisting, offering high comfort.

Another important technology for the rider's safety is the DUAL FLEX SYSTEM UPPER made of two joints, one on the ankle to improve flexion and offer a natural position on the footpegs, and the other on the boot for excellent flexibility and adjustment of the boot itself.

The closure is managed by a micrometric buckle combined with straps with memory adjustment. Both the buckle and the strap and fixing clips are easily replaceable. Another feather in the Crossfire 2 SM's cap is the possibility to easily replace the cuff, as it is entirely assembled with seamless screws.

Sidi Crossfire SM is perfectly placed in the world of supermotards without fearing the adrenaline-filled drifts with the foot out, for which the sole has been meticulously designed.
