

**Wega at Paris Coffee Show to bring WBar smart experience to life
*The easy and intuitive espresso machine stars at Parc Floral in the
French capital.***

From 10 to 12 September , Wega will be present at the Paris Coffee Show with WBar, sharing with the public its incredible versatility and ease of use. A mix of experience, reliability and constant technological research to give the user functionality and cutting edge, achieving high quality results.

WBar - one of Wega's most representative machines - is presented with a rational aesthetic that reduces clutter and is designed to lighten the user's work hours, optimizing time and facilitating dispensing for an espresso of excellence. The innovative control console consists of two cylindrical groups that feature ergonomic backlit vertical push-buttons that offer the ability to set up to four doses. Ease of use is also ensured by four service buttons: two emergency buttons, a cup warmer, and another for dispensing hot water for tea are located directly in the machine's second-floor panel.

An LED spot, between the two units, generates an elegant beam of light on the work surface.

The steam lever is incredibly state-of-the-art and allows the barista to work smoothly and quickly. Two different steam delivery modes are provided: continuous flow or single jet.

Visitors will be able to see Wega's WBar up close at booth A - Hall 3, inside the Parc Floral in Paris and be won over by its practical and efficient attitude.
