

## **Macap officially launches LEO 55 at Triestespresso 2022**

*The new coffee grinder inaugurates a new stylistic course for the Treviso-based brand, ever closer to home design.*

Triestespresso returns from 27 to 29 October and Macap is preparing to inaugurate the tenth edition of the event by presenting its latest creation: the LEO 55 coffee grinder.

With its refined and attractive lines, LEO 55 is not just a coffee grinder but an authentic design object. Created to complete and complement Macap's Studio line, its style is capable of characterising environments with a unique and refined imprint, achieving the experience and research typical of Specialty Coffee even at home.

Thanks to its 390 Watt motor power, LEO 55 offers respectable grinding performance. The new 55 mm flat grinders are patented with reduced coupling for better parallelism, and the screwless grinder removal system allows fast and incredibly smart cleaning. Also totally renewed is the interface that combines maximum ergonomics with practical intuitiveness; a button to select the desired dose (single, double or continuous) and a start button in IP68 that can be activated directly with the filter holder.

The elegance of this product is evident in the attention to detail, in particular the aluminium knob of the micrometric adjustment and the brand's laser-printed logo on the back. LEO 55 is also available in two different colours, black and satin grey with the option of a chrome finish.

Macap awaits visitors in Hall 27 - Stand 18 to discover all the facets of this newcomer and to show them the whole world of coffee grinders dedicated to professionals or simply to lovers of a good espresso, at home or at the bar.
