

Shot 2, the new LDT inspired by the Sea Abyss arrives

An intense and vibrant colour for a shoe that has won many awards amongst professionals.

It is the same colour as the sea but is a much deeper shade.

The Shot 2 Abisso is a new limited edition shoe which, in 2022, won forty-five races on the feet of the professionals who chose them to face their challenges, on the roads of the events included on the professional cycling calendar.

This intense colour, something between blue and green, it reminiscent of the depths of the oceans, their majesty, and is totally in line with the Shot 2, which - from the moment of its official launch on the market - has been able to impose itself and become one of the Treviso company's best sellers.

Like the continuous movement of the seas, the new limited edition tells the story of Sidi's continuous quest to improve performance. An inexorable path that, season after season, has led these products to be the main characters in the most important competitions at international level and to support athletes in an exclusive and customised way, looking for solutions to their needs in order to be more and more avant-garde.

The new shade certainly does not go unnoticed, thanks to its almost electric nuances, and is dedicated to those who, on a bicycle, are not afraid to dare.

The characteristics of the Sidi Shot 2 in brief.

SHOT 2 are high-performance shoes, characterised by high performance in the pushing phase. Lightness, comfort and design are further improved compared to the previous Shot model. The integrated heel is light and reinforced to prevent deformation after prolonged effort and pressure, while the new "C-BOOST SRS" sole in latest-generation carbon features a special conformation of the metatarsal area that allows greater power transmission on the pedals.

The carbon parts most subject to deterioration are protected by special SRS inserts in Nylon and Thermoplastic Polyurethane integrated with ventilation holes that favour breathability. The steel screws present reduce wear and make the product more resistant to abrasion during walking.

The shoe uses the "Double Tecno3 Flex" closure system to completely eliminate the pressure zone on the instep and considerably improves the closing sensation. It is replaceable and guarantees micrometric adjustment and closure speed thanks to a quick release of tension.
