

## **LEO 55 takes center stage at Milan Coffee Festival 2022**

*The new coffee grinder, from the Venetian brand, lands in the design capital*

Keywords: aesthetic and design. From 12th to 14th November, Macap is getting ready to present its latest creation in one of the world's fashion and design capitals. The LEO 55 coffee grinder will be the main event at the brand's stand at the Milan Coffee Festival, ready to amaze lovers of minimalist and refined designs.

The LEO 55's 390-watt motor offers optimal grinding performance while the new 55 mm flat grinders are patented with reduced coupling for better parallelism. As for cleaning? The screwless grinder removal system facilitates this process as well as making it quick and incredibly smart. The totally renewed interface combines maximum ergonomics with practical intuitiveness; a button to select the desired size (single, double or continuous) and a start button in IP68 that can be activated directly with the filter holder.

The elegance of this product is evident in the attention to detail, in particular the aluminium knob on the micrometric adjustment and the brand's laser-printed logo on the back. LEO 55 is also available in two different colours, black and satin grey with the option of a chrome finish.

Macap awaits enthusiasts at Stand L06 to see LEO 55 live, a coffee grinder that is also a true design piece, conceived to give environments a unique and distinctive imprint.
