

Astoria presents Plus4You Advantage, an icon that links past and future in the name of ergonomics at the service of the barista

The reinterpretation of the successful machine of the Treviso brand combines ergonomics, style and customisation through highly innovative solutions.

A machine with a refined design to guarantee the winning mix of avant-garde and experience. Plus4You Advantage is the new arrival at Astoria and promises to be a new benchmark for the range of the Treviso brand, which has decided to reinterpret an icon with a view to stylistic and technological evolution, at the service of the barista's needs and professionalism.

With its sinuous and elegant shapes, Plus4You Advantage was developed in collaboration with the Adriano Design studio and is characterised by its innovative functionality, maximum ergonomics and high customisation possibilities. Steel is undoubtedly the material that enhances its aesthetic and functional mission, allowing it to provide resistance, robustness and maximum hygiene in the working areas as well as giving the object a timeless design. In this respect, the upper casing, bowl and sides are available in a wide palette of colours to suit any environment in a practical and elegant manner.

Ergonomics is one of the keywords of the Plus4You Advantage, which has been designed to ensure maximum dexterity for a professional barista. The service display has been positioned in the central part of the machine, so that all the necessary information is easily accessible at all times, while the adjustable worktop is suitable for all types of pots and cups, thanks to the cup lift system. The fully integrated cup lifter offers the comfort of managing the height of the platform with a simple gesture.

Speaking of technology, Plus4You Advantage is a veritable concentrate of innovative solutions to facilitate extraction in every single step. The interface has been completely redesigned with an incredibly smart touch screen display and new selection buttons, which are larger and coordinated with the steam knobs. The machine is also available in two different thermals: multi and single boiler. The first, with thermo-controlled and independent groups, allows you to manage different temperatures and infusion times, specific for the various types of coffee. The second instead - indicated for high performance - is highly performing at peak times, with an excellent in-cup result, as well as allowing customisation of extraction profiles. One of the pluses of this product is the possibility of equipping it with the new Autostreamer lance to heat and froth milk automatically, which allows the temperature to be detected and the frothing level to be adjusted via an internal probe.

Technology, attention to detail and a high level of customisation are the features that make Plus4You Advantage a versatile machine with a strong personality, capable of uniting Astoria's two souls - one deeply rooted in its tradition and the other continuously projected towards the future.
