

**The next generations of Macap are called MI20 Touch and MI40 Touch**

*The Venetian brand launches two new products from their professional line with a modern and attractive design.*

Designed in collaboration with the V12 Design studio, the MI20 Touch and MI40 Touch are the latest additions to the Macap range, the result of the technological evolution of two professional line grinders. Both feature a linear and compact style, accommodating an innovative 3.5" touch screen display, and an intuitive technological HMI developed in-house by the brand.

Even more technological and user-friendly, the interface of the new MI20 Touch and MI40 Touch feature a dynamic homepage with easy-to-use icons. There are three working modes to choose from - Standard, Push & Grind or Barista - with four programmable serving options and Fast Program function. From the MI40 Touch display the fan can also be conveniently adjusted across five levels.

The MI20 Touch has a hopper capacity of 500 grams and 58 mm flat grinders while those of the MI40 Touch are 65 mm with a capacity of 1.2 kg. Both models feature a new removable saucer and the metal fork with anti-vibration coating for maximum convenience. An LED light perfectly illuminates the work space and a USB-C port under the display makes software updates and customisation even faster and easier.

The MI40 Touch is also equipped with an adjustable cooling fan and forced air intakes on the base, to prevent overheating and ensure maximum performance at all times, without the need for a cooling fan.

maximum performance at all times, without any drop in production.

Available with two adjustment versions - click or micrometric - these grinders are truly champions of ergonomics and you can choose the most suitable for any environment from three different classic colours - black, grey and white - as well as a chrome finish.
