

MTB Drako 2S SRS

Maximum foot stability to unleash all the power.

MTB Drako 2S SRS change their appearance with a completely new design that combines simplicity and elegance for all cross-country enthusiasts.

Designed for maximum foot stability, the Drako 2S SRS MTB combine elements that guarantee unrivalled stability. While the Firmor lateral support wraps around the foot and stabilises it throughout the activity, the combination with the MTB SRS Carbon-Ground sole - made of pure carbon with interwoven fibres - helps transfer all the power to the pedals for high performance. A journey that began in 2002 when Sidi introduced the first carbon sole in history. An adventure in continuous development that has led to the production of soles with pure hand-laid fibres capable of reaching a stiffness level of 12.

With the aim of providing long-lasting products, the materials that make up the sole help to prevent damage when in contact with the pedal and ensure a long service life. With the same objective in mind, Sidi has designed its shoes so that most of the components that make up the sole, such as the rotor and the anti-slip rubber inserts, can be replaced. They are all easily and independently replaceable elements, specifically designed to last.

The double-rotor closure, together with the adjustment system, makes it possible to quickly adjust the fit even while racing. This is a simple operation that can be performed even in the presence of mud, as the rotor itself is designed to prevent dirt and other debris from settling. Dyneema® rope and a high-density resin rotor - the result of more than 30 years of work and continuous refinement - make this patented technology a valuable and incredibly durable adventure companion. It also contributes to its longevity.

Spry yet robust, comfortable yet stiff: The Drako 2S SRS MTB are the ideal choice for fast competitions with particularly technical parkour sections. A concentration of Sidi technology to face the toughest off-road tests.
