

ADVENTURE 2 GORE

All the comfort, breathability and safety you need to discover the world.

Travelling and exploring without limits are just some of the features of the **Adventure 2 GORE**. Its special affinity for dirt roads and unexplored trails places this naturally comfortable model in the family of touring boots. To support their innate flair for daring exploits, the Adventure 2 GORE use all the necessary - and carefully designed - technologies to keep up with the rider's needs.

Comfort and safety are therefore the main objectives of a shoe like the Adventure 2 GORE, essential for long-distance touring. The first element designed specifically for long hours on the bike is undoubtedly the closure, which is made up of a system of micro-adjustable buckles for a personalised fit.

Off-road control is entrusted to the Flex System, a technology that is particularly suited to upright riding thanks to its flexibility and stability of movement.

On the other hand, the non-slip rubber sole offers optimum grip and total control in any situation. Aware of the unpredictable nature of off-road riding - confirmed by over 50 years of experience - our sole adapts perfectly to all situations, handling both wet and dry trails in the same way to ensure pure fun in safety, whether it's a ford or a race through the desert dunes.

Designed to last as long as possible, these boots offer the best choice of materials and complete freedom to replace all parts.

Offering impact protection, maximum control and support in all types of terrain, the Adventure 2 GORE are powerful allies for the most incredible adventures. The technical Full Grain upper and GORE-TEX membrane make them absolutely unstoppable.

Coming soon to all authorised retailers in the following colours Tobacco, Grey, Black/Black.

The **Mid Adventure 2 GORE** is a shorter and more practical version for everyday use. Slightly modified from a technical point of view to match its shape, it is fastened using a system of micro-adjustable, interchangeable buckles and a Velcro strap. The same features in terms of comfort and protection, but shorter for greater ease of use.
