

CrossAir, the lightest for racers

Designed with the pros, this boot packs the ultimate in Sidi technology into a few grams.

CrossAir sets new standards and raises the bar even higher.

Developed with the professional riders who wear them in the exciting Motocross, Hard Enduro and Superenduro Grand Prix, this model offers all the qualities of a premium product in an incredibly lightweight version. Weighing in at just over 1,600 grams, the CrossAir incorporates all of Sidi's technologies for the ultimate riding experience.

The internal fibreglass reinforced exoskeleton guarantees all the support and safety required for intense riding, while the integrated hyperextension system supports the boot by protecting it and preventing excessive movement. Maximum control and freedom of movement are guaranteed.

The ultra-flat inner liner maximises contact with the bike for excellent feel and unparalleled comfort, while the sole, developed in collaboration with Vibram®, offers a new level of grip and flexibility. Its durable structure is designed to last and allow you to cope with any situation.

Designed for quick adjustment, it features 3 independent micro-adjustable and interchangeable levers and Velcro closure for easy and convenient fit adjustment.

Available in seven colour variants, this boot is a guarantee of high performance in all conditions, effective protection and constant support, especially in the areas most exposed to stress during riding. In keeping with Sidi's 'built to last' philosophy, all materials are carefully selected, such as the Technomicro microfibre upper.

Light and safe, thanks to the constant grip of the sole and all parts in contact with the bike, CrossAir is the perfect choice for off-road adventures.
