

Astoria's new **AB200** coffee machine will be officially launched at the World of Coffee in Copenhagen

*Form follows function: **AB200** features an elegant design and intuitive functionality for a high-quality cup*

From 27th to 29th June, Astoria will be present at the WOC in Copenhagen with an eagerly awaited novelty. Visitors will be able to take a closer look at the new **AB200** machine, created to combine Astoria's timeless design with practical rationality.

AB200 is a project overseen by the designer Valerio Cometti - Studio V12 Design - who has succeeded in combining stability and robustness with refinement and elegance. The machine has been designed to guarantee the barista a high level of performance: it has compact dimensions, shot counters for each group, new Astoria filter holders, a height-adjustable drip tray and a lever for control and activation of the steam with the Purge function. **AB200** can be equipped with a 3.5" Touch Screen Display, the Easy Clean manual steam wand and the Autosteamer wand for temperature control and froth level of milk. Access to the machine for maintenance is easier than ever thanks to the side panels.

The booth will showcase two machines: one black two groups machine without display and one white two groups with a 3.5" Touch Screen Display.

Both machines will be accompanied by ASI40 Touch coffee grinder, which features an innovative 3.5" Touch Screen Display and intuitive HMI.

With a 1.2 kg hopper capacity and 65mm flat grinders, ASI40 Touch is enhanced by a LED light that perfectly illuminates the working area and an USB-C port under the display that makes software updates and display customisation even faster and easier. It also features an adjustable cooling fan and forced air vents on the base to prevent overheating and ensure maximum performance at all times.

Astoria's surprises don't end here, as a Plus 4 You Advantage Single Boiler will be on display in the SCA Retail Buyer's Lounge.

From 27th to 29th June, the brand will therefore be welcoming visitors to Hall E, Stand ED-007 at the Bella Center in Copenhagen to discover the exciting new features and performance of the new range.
