

Wega at Sigeo 2025 with Nova and J-65 Touch

A winning duo that the brand is ready to present in Rimini.

Wega returns to Sigeo 2025 with two outstanding models from its range. From 18th to 22nd January, visitors will be able to see the Nova coffee machine and the J-65 Touch grinder up close.

The design of Nova is based on the principles of ergonomics and ease of use, with the aim of improving user experience. "Defragmentation" is the key word that defines this machine, whose sleek and floating forms dictate its functionality.

Equipped with a touch-screen display for an intuitive and fast interface, Nova offers a spacious working area for baristas, illuminated by two LED spotlights for each group. The integrated riser allows two machine group configurations to be used with a single adjustment.

Additional exterior lighting highlights the modern design.

The Wega stand will also feature the exclusive J-65 Touch grinder. Featuring an innovative 3.5" touch screen display and intuitive HMI, it ensures first class performance.

The J-65 Touch has a 1.2kg hopper capacity and 65mm flat burrs. LED lighting illuminates the work area perfectly, while a USB-C port under the display makes software updates and customisations faster and easier.

It also features a cooling fan and forced air intakes at the base to prevent overheating, ensuring maximum performance without sacrificing productivity.

Available in black with chrome details, the grinder has micrometric adjustments and is characterised by its ergonomics and comfort, enhanced by anti-vibration coatings that eliminate noise.

Visit Wega at stand 070-073 in Hall B1 of the Rimini Expo Centre. From 18th to 22nd January, come and experience Wega's world of ergonomics and innovation.
