

The new versions reinforce the brand's ongoing commitment to achieving the highest levels of performance in competition.

Nimbl kicks off the year by updating some of its most popular products in terms of performance, comfort and aesthetics, while retaining the features that have made the brand famous in the world of professional cycling.

A defining element of the entire Nimbl range is the carbon monocoque sole. Used on all top models, it ensures maximum power transmission, balanced stiffness and uncompromising lightness.

One of Nimbl's best sellers is undoubtedly the **Ultimate Exceed Pro Edition**, which in its updated version offers a series of improvements aimed at maximising performance. The new ventilation system provides improved breathability, while the new cotton eyelets on the **BOA Li2** closure system improve comfort and fit by reducing pressure on critical areas of the foot.

Weighing in at **192 grams (size 43)**, this shoe strikes the perfect balance between lightness, comfort, and stiffness. This versatility makes it a great choice for multiple disciplines. Designed for professionals, it is the brand's quintessential racing shoe, perfect for **sprinters, climbers, and stage hunters**. It adapts to different needs without compromising performance. Finally, the **new graphic design** reinforces the racing character of the shoe, underlining its competitive spirit and high-performance DNA.

Redesigned to deliver the ultimate, the **Ultimate Feat** also gets an update. Its unmistakably elegant style and new carbon monocoque sole are now synonymous with lightness, support, and optimal power transmission. The redesigned reinforced microfibre Power Strap provides even more effective support, further improving overall comfort compared to the previous model. Weighing in at just 180g (size 43), the Ultimate Feat is the ideal choice for those looking for performance, stability and a perfect fit.

The **Ultimate Air** is the ideal choice for cyclists who want uncompromising **lightness and performance**. Designed for those who push their limits, this model is a perfect blend of lightness, comfort and high performance. The new carbon monocoque sole, previously used in the **Ultimate Exceed Glide** and **Ultimate Feat** models, maximises every pedal stroke. Its minimalist and functional design gives the shoe an extremely tight fit, increasing control and responsiveness. Its simple, streamlined, and close-fitting design provides an aerodynamic advantage. The lace fastening ensures a secure and personalised fit. At just 167 grams (size 43), it's one of the lightest cycling shoes on the market. Perfect for tackling long climbs, but also for those looking for a shoe that uncompromisingly combines high performance, speed and comfort.

Each pair of **Nimbl** shoes is handmade in Italy, a testament to the brand's craftsmanship. From the **Ultimate Exceed Pro Edition** to the **Ultimate Air**, each product blends innovation and tradition to deliver unrivalled performance, comfort and durability.

Nimbl is a premium performance cycling shoes brand. Our shoes are handmade in Italy serving the most demanding customers, from cyclist enthusiasts to world champions.
