

Functional elegance: Astoria brings AB200 to NRA Chicago

Compact, powerful and refined: the standard for the professional barista.

Astoria returns to the National Restaurant Association Show in Chicago with the AB200, the machine that combines durability, technical precision and contemporary aesthetics. At booth 7666 - North Building, visitors will have the opportunity to explore and test the three versions of the new AB200: single group, double group and the compact double group version.

This presence is designed to allow visitors to experience first-hand the full potential of the AB200 range, which is designed to deliver high performance in a compact space with solutions that optimise operational efficiency behind the counter. Key features include shot counters for each group, the new Astoria portafilters, a dedicated steam lever and a height adjustable drip tray (80 - 125 mm).

The AB200 is built for the daily demands of professional baristas and can be fitted with a range of options to suit every need: a 3.5" touchscreen display, the Easy Clean manual steam wand and the Autosteamer wand for automatic control of milk temperature and frothing.

Maintenance has also been simplified with easily removable side panels that provide quick and safe access to internal components, reducing service time.

With the AB200, Astoria proves that functionality and beauty can coexist, offering concrete solutions for baristas who want to grow with style, quality and reliability.

Join us from 17th to 20th May at stand 7666 - North Building to discover the full AB200 range in person.
