Tour de Pologne UCI WorldTour: Valsir renews its partnership with Lang Team

Valsir and the Tour de Pologne are united once again by their shared passion for cycling and vision for a sustainable future.

Valsir is once more standing alongside Lang Team as the official partner of the Tour de Pologne UCI WorldTour from 4 to 10 August.

This commitment further strengthens the bond between the Italian company, a leader in the production of advanced sanitary and heating systems, and the world of professional cycling. The partnership is founded on shared values of dedication, sustainability and innovation.

*'We are thrilled to confirm our partnership with the Lang Team for these two important races,' says **Barbara Rosek, Board Member of Valsir Polska**. "Cycling is much more than a sport. It's a mindset and a way of life, teaching determination, teamwork and mutual respect. That's why we're proud to support the event, as a sign of our commitment to inclusivity and excellence."*

Active for over twenty years, Valsir Polska is based in Skawina and is part of Valsir S.p.A., an Italian company headquartered in Valsabbia (Brescia) that is known for its silent drainage systems, radiant floor heating solutions, concealed cisterns, and other innovative sustainable building technologies.

*"We're increasingly convinced that sport and sustainability must go hand in hand," emphasises **Czesław Lang, General Director of the Tour de Pologne and founder of Lang Team**. "Companies like Valsir, which are committed to environmental responsibility and improving everyday life, are ideal partners to help us promote a positive message. The bicycle itself is the perfect symbol of a healthier, more sustainable lifestyle."*

The partnership deepened in 2022 when the race started from the headquarters of Valsir Polska in Skawina, an experience that made a lasting impression on participants and spectators alike. Now, in 2025, the collaboration returns with even greater energy.

By doing so, Valsir is once again joining forces with Lang Team as a key supporter of one of the most significant cycling events of the European summer. This helps to elevate not only the sport itself, but also innovation and a strong culture of sustainability.
